In the present article, a comparison has been made of densities of nine petroleum paraffins having solidifying points between  $30.5^{\circ}$  and  $64.0^{\circ}$  (which were determined as a function of the temperature) with expansion coefficients of lignite-tar paraffins calculated according to the work of Zietkowski. It was found that the expansion (Chemistry--Physical, TT, v. 9, no. 6) (over)
